Other findings:

- Video duration very weakly correlated with all other variables.
 - Subscriber count only highly correlated with channel view count (but not with any variable for single videos).
 - Comment count has a slightly higher correlation with like count than with view count.

Conclusions

- Cats (pets) videos are the most popular followed by "food" videos.
- Most videos in March and during the afternoon.
- View count strongly correlated with like count; less so with comment and subscriber count.
- Duration is not affecting video and channel popularity
- Video comment is slightly more correlated with likes than views.
